Electrophysiologic Evaluation in Otolaryngology

Bobby Ray Alford, James Jerger, Herman A. Jenkins, 1997-01-01

The past decade has seen a rapid increase in the application of electrophysiologic measurement techniques in evaluating patients with hearing and balance disorders. Advances in computer technology have generated new and exciting applications in the areas of electrocochleography, electroneuronography, electronystagmography, and the auditory brainstem response. This book examines these recent developments and explores new areas of the field currently under investigation. An important issue in electrocochleography today is the widened AP-SP complex. Contributors to this book evaluate its significance in patients with cerebellopontine angle tumor. The many applications of the auditory brainstem response are surveyed, as well as the current status of the mid- and long-latency evoked responses. An overview of the relatively new area of otoacoustic emissions and its clinical applications is also included. Practicing otolaryngologists, otolaryngology residents, audiologists, audiology students, and auditory and vestibular scientists will benefit most from this well-researched book.

In addition to clinical applications and case studies, this text includes sections on the foundational science and historical background of auditory evoked potentials as well as clinical practice and management. Key Features: Includes case studies written by clinicians who are experts in auditory evoked potentials, helping to highlight clinical applications in the specialty. Discusses how auditory electrophysiology techniques are used in central auditory function testing. Provides practical guidelines on how to write a clinical report, with easy-to-use templates, helping readers quickly master report writing. Contains a chapter on the application of principles of evidence-based practice, to guide clinical technique and analysis of auditory evoked potentials. Ideal as an introduction to the field for graduate students in audiology and ENT residents, Auditory Electrophysiology is also a useful guide for clinicians who want to refresh their skills or add to their practice. It fills a gap in the literature for an up-to-date text and reference on all aspects of auditory evoked potentials.

**Intraoperative Cranial Nerve Monitoring in Otolaryngology-Head and Neck Surgery** Joseph Scharpf, Gregory W. Randolph, 2022-01-03 This book covers the scope of cranial nerve monitoring of all cranial nerves that are of practical importance in head, neck, and thyroid surgery. It discussed enhanced patient outcomes in a wide array of surgical procedures in the head and neck that require the maintenance of complex regional functions by protecting cranial nerve integrity. Organized into four parts, the book begins with Part I offering historical perspectives on the subject while simultaneously reviewing various basic and advanced electrophysiology. Part II thoroughly reviews the extra-temporal bone facial nerve (CN VII), Glossopharyngeal Nerve (CN IX), Vagal/Recurrent Laryngeal Nerve (CN X), Spinal Accessory Nerve (CN XI), and Hypoglossal Nerve (CN XII). Subsequent chapters in Part III provide a complete and applied understanding of the neurophysiological principles that facilitate the surgeon’s ability to monitor any nerve and intraoperative neural stimulation and nerve monitoring. The book presents various techniques as the standard of care to provide optimal neural detection, understand the neural functional real-time status during surgery and optimize specific surgical outcomes such as thyroid surgical outcomes. Closing chapters offer essential conversations regarding ethical considerations in nerve monitoring and medical malpractice. Filling a gap in the literature, Intraoperative Cranial Nerve Monitoring in Otolaryngology: Head and Neck Surgery provides a single source for surgeons who wish to optimize their outcomes in patient care and accelerate their learning curve to the level of more experienced surgeons.

authors and editors have condensed the research on the most common otorhinolaryngological complaints into this indispensable volume. Their unique approach color-codes the level of research backing each set of evidence in order to make assessment of the evidence as quick and useful as possible. Each clinical problem is presented with a color key, letting the physician know the level of evidence available: green (high-level evidence), yellow (low–moderate levels of evidence), or red (major disagreement or only minimal low-level evidence).
